Connecting to LSUHSC-Secure wireless with an Android device

- OS has to be 2.2.2 (Froyo) or later

- Go to Wireless & networks/Wi-Fi settings to manage any available networks and choose “LSUHSC-Secure” from the list of available networks.

- Enter the following when prompted
  - The authentication for the network is 802.1x
  - EAP method is PEAP
  - Phase 2 authentication is MSCHAPV2
  - Identity: your LSUHSC username
  - Password: your LSUHSC account password

- You may need to prefix your LSUHSC user i.d. with lsumc-master\userid in order for the authentication to work. This differs by device used.

- Click connect (or similar) and it should show you are now on the LSUHSC-Secure network
